

**Version 2.0.11.1**  
**29 August 2023**

## Bug fixes:

- File transfer error when importing files saved with the Timestamp using the new AutoID function.
- File transfer error when importing individual test files versus project folders.
- Corrected some French translations.

**Version 2.0.10.0**  
**25 August 2023**

## Bug fixes:

- Zoom X/Y, X, Y button doesn't work correctly
- On printed report in the "Test Standard" fixed extra characters printed after the end of the text "Manual Limits"
- Event markers were in the wrong location in Kilofeet or Miles measurement mode
- Batch reports now using correct formatting
- Fixed bug where schematic was only printed for first file in batch print
- French event table context menu now in French instead of Spanish

## Features additions:

- Event analysis editing buttons below event table
- Option to disable left-click cursor snapping on graph
- Automatically rename files with same name when downloading from OTDR
- Added ability to preview batch prints
- Added event markers to graph
- Combined 2-point and event loss columns into single loss column
- Added "cumulative loss" column to event table
- Average setting now shown in units of time rather than number of averages
- Added ability to set first, last, or both events as launch and/or receive respectively, including batch processing options for selected traces or all traces in the folder
- Added support for changing the test standard from the list of standards supported on the OTDR, including batch processing
- Added support for OCA (Optical Channel Analyzer) instrument files

**Version 2.0.6.4**  
**26 January 2022**

- Fixed problem where text was missing from button in firmware upgrade file selection dialog box.
- Fixed issue where data from LTS files was not importing correctly.
